SALW Guide

Global distribution and visual identification

Daewoo DAR 21 / XK8

Fact sheet

https://salw-guide.bicc.de
Daewoo DAR 21 / XK8

The Daewoo DAR 21 (Daewoo Assault Rifle-21st Century) also known under its development name XK 8 was designed by the South Korean company S&T Motiv (formerly Daewoo Precision Industries). The assault rifle was developed for the Korean army, but was rejected after a trial period in favor of the Daewoo K11. The rifle has not been mass-produced, but is now offered for export sale. In its design and functionality the DAR 21 resembles the Israeli IWI Tavor TAR-21.

Technical Specifications

<table>
<thead>
<tr>
<th>Category</th>
<th>Assault Rifles</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating system</td>
<td>gas piston, selective fire with 3rd burst</td>

Global distribution map

The data on global distribution and production is provided primarily by the BwVC\textsuperscript{1}, but also from national and regional focal points on SALW control; data published by think tanks, international organizations and experts; and/or data provided by individual researchers on SALW. It is not exhaustive. If you would like to add to or amend the data, please use the website's feedback function.

\textsuperscript{1} Bundeswehr Verification Center
Global distribution list

The Daewoo DAR 21 / XK8 is found in 1 countries according to our data.

South Korea (KOR)  

Explanation of symbols

- 🇰 Country of origin
- 🏢 Licensed production
- 🕵️ Production without a licence

- 🇰 Government: Sources indicate that this type of weapon is held by Governmental agencies.
- 🇳 Non-Government: Sources indicate that this type of weapon is held by non-Governmental armed groups.
- 🇰/unspecified: Sources indicate that this type of weapon is found in the country, but do not specify whether it is held by Governmental agencies or non-Governmental armed groups.

It is entirely possible to have a combination of tags beside each country. For example, if country X is tagged with a G and a U, it means that at least one source of data identifies Governmental agencies as holders of weapon type Y, and at least one other source confirms the presence of the weapon in country X without specifying who holds it.
**Note:** This application is a living, non-comprehensive database, relying to a great extent on active contributions (provision and/or validation of data and information) by either SALW experts from the military and international renowned think tanks or by national and regional focal points of small arms control entities.

Annex

Tagging of Sources

We believe that our Guide should be as transparent as possible without endangering the confidentiality of our sources. Rather than name the exact source for each unit of data, we have created tags so that users can at least know whether the data comes from a primary or secondary source, and by which medium it can or has been found. All incoming data is validated and then tagged by the project team at BICC before it enters our database.

Sources are tagged according to the following criteria:

1. **Primary Sources:**
   
   These are presentations of facts. They are proof of an SALW event (e.g. a transfer, sighting, misuse, etc.) because the source was created at the time of the event itself. Primary sources as usually original documents such as transfer authorizations, firearms legislation, or academic journals presenting results of a study on SALW holdings in a particular country, for example. However, they can also be information offered by a person with direct knowledge of an SALW event or who has documented an SALW event at the time that it happened.

2. **Secondary Sources:**
   
   These are interpretations or evaluation of facts. Secondary sources contain commentary and analysis of SALW events that are documented in primary sources.

Sources are also tagged according to the dominant medium of delivery:

- **A. Written** - the source is based on written words.
- **B. Oral** - the source is based on spoken words.
- **C. Visual** - the source is based on seen events or optical images.

These criteria make our tags two-dimensional. While the process of classifying sources is a primarily subjective one, the project team at BICC has developed the following table to serve as an example of possible sources within each category.

<table>
<thead>
<tr>
<th>Primary</th>
<th>Secondary</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### About the Guide

The Interactive Guide on **Small Arms and Light Weapons** is an open access tool, designed to build knowledge on how to identify different types, makes and models of commonly used SALW in organized violence; to collect data on the global and country-specific spread of these SALW; and to describe some of their visual and technical specifications.

The guide is not an exhaustive list of all SALW that are used around the world.

Global SALW control relies on, among other things, data and knowledge of the weapons themselves. Our aim is that the Guide will be used to support national reporting duties on SALW holdings; facilitate and ameliorate the collection of data on SALW; and increase general knowledge of global distribution of SALW.

The interactive Guide was developed by **BICC** in close cooperation with the **Bundeswehr Verification Center** (BwVC), and with the generous support of the **Federal Foreign Office, Germany**.
